new perspectives —tives on scandi —navian design

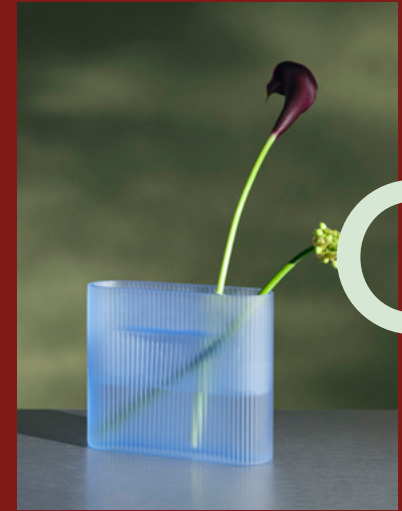

03

Muuto is rooted in the Scandinavian design tradition characterized by enduring aesthetics, functionality, craftsmanship and an honest expression. By expanding this heritage with forward-looking materials, techniques and bold creative thinking, our ambition is to deliver new perspectives on Scandinavian design.

In fact our name, Muuto, comes from muutos, meaning new perspective in Finnish. We handpick leading contemporary designers who are strong interpreters of our philosophy and combine their talents with the passionate Muuto creative team. You will know our design because it has muutos: objects made sublime through new perspectives, enjoyed across the world, representing the best of Scandinavian design today.

creating

intentional spaces

*There is more to design
than meets the eye*

Intuitively, we all know the feeling of entering a room and immediately feeling at ease or stimulated. Interacting with elements of design—whether it's sensations of light, color, or texture—can trigger emotions and spark a dynamic interplay of neurotransmitters in our brains.

Studies have shown that engaging with art, such as viewing a painting, listening to music, or experiencing a beautifully designed space, can increase blood flow to the brain by up to 10%, equivalent to looking at someone we love.

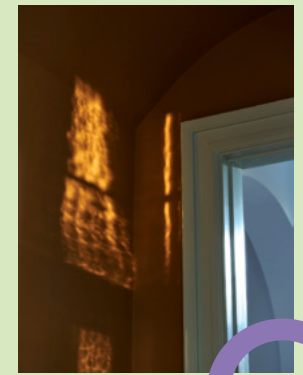

While many aesthetic expressions affect our bodies and minds, we primarily focus on five elements that have been the subject of extensive research—Color, Form, Tactility, Light, and Nature. This research discipline is known as the study of neuroaesthetics.

The impact of neuroaesthetics on design and spaces

Neuroaesthetics is about the mind-body connection: a scientific field that explores and measures how creative expression impacts us. It provides a deeper understanding of how art, design, and architecture activate our senses and stimulate our sense of well-being. Understanding how we respond to different spaces allows us to better discern the connection between body, mind, and design.

Through our longstanding collaboration with Susan Magamen, executive director of the International Arts+Mind Lab at Johns Hopkins University, we have explored design's potential for fostering well-being. This journey began with our exhibition 'A Space for Being', made in collaboration with Google, Reddymade Architecture, and Johns Hopkins University, where we set out to explore design's impact on our biology. A project that has since inspired us to create more intentional objects and spaces.

You might see yourself as
separate from your surroundings,
but in truth, you are intertwined
with the space around you.

09

Engaging with art, such as viewing a painting, listening to music, or experiencing a beautifully designed space, can increase blood flow to the brain by up to 10%, equivalent to looking at someone we love.

A space that feels just right

There are many lessons to be learned from neuroaesthetics research and principles when it comes to designing spaces for many. While healthcare, hospitality, education, and office places each come with a set of practical requirements, it should not all be about functionality and utility.

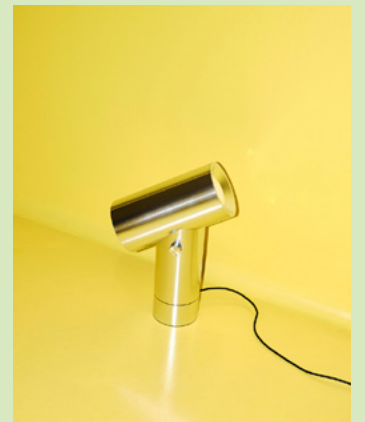

For instance, imagine stepping into a space where the calming presence of greenery, the warmth of wood, the softness of wool textiles, and the grounding feel of ceramics or clay surround you. These natural elements have been shown to reduce stress, promote calmness, and support faster recovery. This understanding of neuroaesthetics guided the design of Diakonissestiftelsen's hospice, a place celebrated for its thoughtful and compassionate approach to end-of-life care. To read more about this transformative project, turn to page 82.

Similarly, light allows us to enhance performance in schools or induce a sense of serenity at our favorite hotel. Soft shapes have been proven to feel intuitively good, while color has the power to energize or soothe.

It all comes down to space and intention: What kind of environment are we aiming to create, and what should it evoke? Bringing people together in an office requires a different approach than designing a space for focused

work. By drawing from the principles of neuroaesthetics, we can make more informed decisions, tailoring spaces to the people who use them and the activities they support.

Our commitment to intentional design, shaped by neuroaesthetic research, demonstrates the potential of this approach in enhancing our everyday environments. By integrating these principles, we aim to create spaces that support well-being—whether at home, at work, or in public settings. The focus is on creating atmospheres that evoke the emotional responses we seek.

Meeting — Today's meetings can take many forms; the informal or not-so, creative brainstorming sessions or even conferences with hundreds of attendants. Some meetings are short and casually done standing at a high table, while others are prolonged with a need for added comfort, at a conference or in a board room.

Muuto offers a uniquely versatile collection of furniture, lighting and accessories with an extensive range of colors, materials and textures allowing one to add character, functionality and something unexpectedly evocative to the places we meet – be it bold and vibrant or refined and subtle.

Working — Today, work is not merely done at the office and rarely in a single place throughout the day. As we perform diverse tasks, we seek an equally diverse range of spaces to create, connect, think and relax. From the hushed and intimate to the collaborative and social – the agile workplace needs to accommodate focus, collaboration, and temporality.

Muuto's extensive collection allows one to create flexible, contemporary spaces with a distinctive sense of homeliness, be it quiet and touchdown spaces or agile places for co-working and desk sharing. By incorporating elements of adaptability and personalization, our pieces address the needs of an increasingly nomadic workforce.

Socializing & Pausing — Be it a hotel lobby, public space, or a lounge at the office, a social space is a place for connection, a focal point around which we gather for informal conversation, creative exchange, and unexpected meetings. It is the heart of the community for work and leisure, where moments of pausing are just as important as engagement.

Our collection offers softly inviting lounge chairs, sofas, benches, and other design objects that enhance the spaces where we come together. These often make the important first impression, communicating identity through color, composition, and form, compellingly.

The Connect Modular Sofa, with its *flowing design* and smooth proportions, becomes the focal point in open spaces. Its *curved lines* and comfortable seats offer a cozy and inviting atmosphere, naturally *drawing* people together.

Location — Copenhagen, Denmark

creating comfort

Diakonissestiftelsen's hospice has been praised for its innovative work and distinctive space in central Copenhagen. Here, its newly retired director Helle Tingrupp speaks about the balance between aesthetic considerations, practical functionality, and the deeply human aspect of end-of-life care.

Connecting the project to Muuto's ongoing exploration of neuroaesthetics, founder and executive director of the groundbreaking International Arts + Mind Lab (IAM Lab), Susan Magsamen, offers some of her insights into why these principles work in practice.

Diakonissestiftelsen's hospice is renowned for its approach to end-of-life-care, transforming decades of experience, tacit knowledge and leading research on neuroaesthetic into a tangible space. One that makes a great impression on anyone who passes through its doors.

"This hospice and its spirit was conceived as a space where care goes beyond the clinical to encompass the emotional, spiritual, and aesthetic needs of patients and their families. Over the years, we've learned that the environment plays a crucial role in the well-being of our patients," says Helle Tingrupp.

"This hospice and its spirit was conceived as a space where care goes beyond the clinical to encompass the emotional, spiritual, and aesthetic needs of patients and their families. Over the years, we've learned that the environment plays a crucial role in the well-being of our patients."

— Helle Tingrupp

Susan Magsamen, the founder and executive director of the International Arts + Mind Lab (IAM Lab), Center for Applied Neuroaesthetics at Johns Hopkins University School of Medicine, is a frequent collaborator of Muuto. When speaking of spaces for healthcare and neuroaesthetics, she emphasizes how consideration of sensory elements has a profound effect on the well-being of patients, their families, and healthcare workers.

“We strive to create an atmosphere that feels welcoming and serene, challenging the traditional, somber perceptions of a hospice. Our goal is to build a hospice that feels both like a home and a place of care. We need both openness and privacy.”

— Helle Tingrupp

Neuroaesthetics and well-being

As we now know, a range of aesthetic impulses and experiences affect the way that we feel and heal. The field of neuroaesthetics explores how our brains respond to these impressions, revealing the profound impact of design on human emotions and physiology.

Elements such as color, form, light, nature, and tactility activate the brain’s reward system similarly to other pleasurable activities. This has tangible implications for our health and well-being, including stress reduction, mood improvement, and enhanced cognitive function.

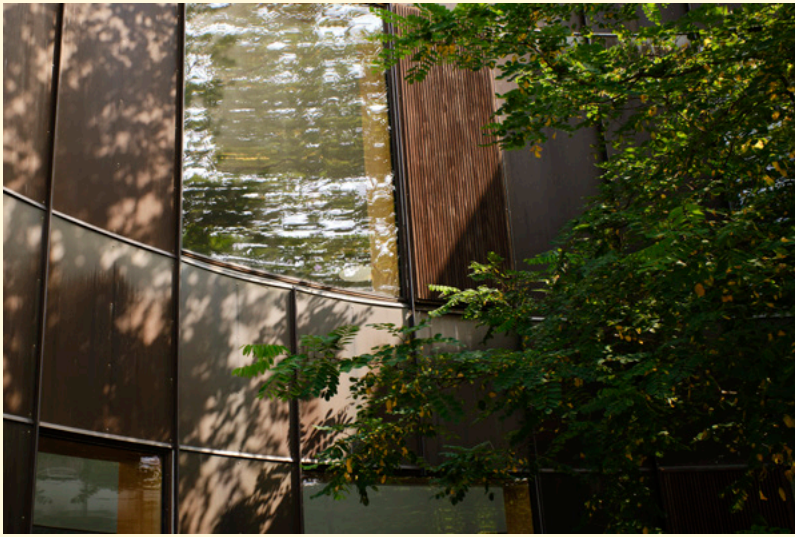

Applying intuition and knowledge

Intuitively aligning with this knowledge, Diakonissestifelsen has developed principles that integrate nature, art, and design into the care environment. These principles are encapsulated in a toolbox that informs decisions on artwork, colors, furniture, materials, and the creation of adaptable spaces to meet the needs of patients and families.

“We strive to create an atmosphere that feels welcoming and serene, challenging the traditional, somber perceptions of a hospice. Our goal is to build a hospice that feels both like a home and a place of care. We need both openness and privacy.”

Working in close collaboration with the architects, they arrived at an open and inviting rounded common room that breaks up the long and impersonal corridors often seen in hospitals, making way for intimate spaces within the structure.

“Throughout the years, we have learned that families want to be part of the community, but also have the option to take a step back and be alone. This is reflected in the design of the common room. These areas are designed to be flexible and supportive, accommodating larger communal activities like Friday singing and dinners, as well as more private moments.”

“Research into environmental psychology suggests that we feel more connected to places that incorporate elements of nature or biophilic design. Natural light, plants, and natural materials can help reduce stress, improve cognitive function, and promote well-being and recovery.”

— Susan Magsamen

Welcoming nature in

Many of these rooms overlook a central courtyard, the green heart of the building, or the expansive outdoor terrace, where many find solace and ease throughout the day. Natural elements like fresh air, natural light, and greenery are essential for well-being and help lower cortisol levels.

Tingrupp explains: "The integration of natural elements, despite the urban location, is another key aspect of the design. Patients have views of nature, even though we're in the city. This connection to the outside world is crucial for their well-being," Susan Magsamen agrees: "Research into environmental psychology suggests that we feel more connected to places that incorporate elements of nature or biophilic design. Natural light, plants, and natural materials can help reduce stress, improve cognitive function, and promote well-being and recovery."

“Certain aesthetic experiences, such as interacting with nature, creating music, or viewing art, may trigger the release of neurochemicals like endorphins (associated with pleasure) and oxytocin (associated with bonding and relaxation). These hormones can improve mood and contribute to a sense of safety, which is particularly valuable in hospice care.”

— Susan Magsamen

Sensing home

This is equally reflected in the choice of natural materials, chosen not only for their beauty and durability, but also for bringing a sense of home to the hospice.

Yet, home feels different to everyone. The private rooms are designed to be flexible and customizable, allowing patients and families to personalize them with artwork, personal objects, photos, sound, and lighting. This personalization is key to transforming an institutional space into a familiar, comforting environment, essential for the well-being of those who spend time here.

“Form, furniture, and objects are chosen for their ability to create a home-like atmosphere, with simplicity and elegance as guiding principles, avoiding sharp edges and harsh lines. Natural materials, such as wood and textiles, add warmth and texture, creating a comforting environment. Light is managed carefully, with large windows allowing for natural daylight while also ensuring privacy.”

A good home is well taken care of, and this is the feeling they aspire to create across the space. A sense that everything is in order, clean, but not sterile, up to date, and in a good place. The interior is a blank slate for the patient to take on. This idea affirms and embodies Susan Magsamen’s statement that ‘integration of these neuroaesthetic principles to foster a home-like environment can increase patient and family satisfaction and comfort.’

Neuroaesthetic principles into action

Certain objects and the use of natural materials carry a deeper meaning, fostering ease of mind and body while creating space for reflection. These elements go beyond decoration, helping to create an environment conducive to healing and comfort. Colors are kept minimal, focusing on soft, neutral tones.

“We use color to evoke a sense of calm and restoration. Soft, neutral tones dominate the interior, providing a soothing backdrop that does not overwhelm the senses. They are less likely to clash with the diverse preferences of our patients. Color is very subjective—some find comfort in soft tones, others might not – but we wanted to avoid anything too stark or unsettling,” says Tingrupp.

Anyone visiting the hospice will notice the distinctive and thorough use of artwork in patient and treatment rooms as well as communal areas. Sculptures, tapestries, drawings, and paintings dot the space, bringing with them a sense of energy and resonance.

“Certain aesthetic experiences, such as interacting with nature, creating music, or viewing art, may trigger the release of neurochemicals like endorphins (associated with pleasure) and oxytocin (associated with bonding and relaxation). These hormones can improve mood and contribute to a sense of safety, which is particularly valuable in hospice care,” explains Magsamen.

Diakonissestiftelsen works with curators and the immense collection of Ny Carlsberg Foundation to select artwork that is both visually intriguing and thought-provoking, intended to gently engage.

“This space is our own interpretation of the care environment, and we hope it feels refreshing and somewhat surprising... it challenges the notion that a hospice should only be a place of sorrow,” says Tingrupp.

Dining — Our dining spaces have become an arena for informal meetings where we socialize with colleagues, friends, and family alike. Be it a bar, café, canteen, or restaurant, atmosphere and comfort are key when setting the scene for a morning meeting or an evening-long dinner.

From the embrace of an upholstered chair to functional and informal benches, Muuto's versatile collection of furniture lets you craft an outstanding dining experience with comfortable and durable quality seating. Pair these with our extensive selection of lighting and accessories, combining function with strong aesthetic qualities that truly elevate any room.

Outdoor — The outdoors offers a refreshing change of scenery—an opportunity to unwind, clear our minds, or simply enjoy a breath of fresh air, whether it's over coffee, lunch, or dinner on the terrace of a favorite restaurant.

Muuto's collection of outdoor designs is distinct and modern while never compromising on comfort. Made with enduring, weather-resistant finishes in a bold range of colors, our outdoor furniture brings a sense of Scandinavian ease to any setting.

designing urban

tranquility

Tucked away in the heart of Copenhagen on Amaliegade, a shared outdoor courtyard offers a peaceful retreat for those working in the surrounding offices. This green oasis, surrounded by lush greenery and bathed in natural light, creates an inviting space designed for relaxation amidst the urban landscape.

To bring this vision to life, Ines Bukhardt, interior architect at Jeudan, and Daniel Braat, landscape architect at COBE, collaborated to create a space that balances both functionality and calm. It serves as a spot for rest, informal meetings, and moments of reflection—a place to pause and step away from the daily grind. The result is a serene environment that offers a much-needed escape from the city's fast pace.

Shaping the space

The design of the courtyard aimed to merge Copenhagen's rich history with modern design elements. White brick tiles are used in the winding bed edges and curved seating, adding a soft, contemporary touch. These contrast beautifully with the historic cobblestones arranged in circular patterns.

“We wanted to respect classic Copenhagen materials while introducing fresh, modern elements,” explains Braat. Plant beds surrounding the seating areas further enrich the space, adding color, texture, and sensory appeal, creating intimate, inviting corners. As the plants

Location — Copenhagen, Denmark

mature, the courtyard will continue to evolve, deepening its connection to the surrounding environment.

A space for pause and productivity

Designing the courtyard required balancing function with aesthetic appeal. The space had to serve multiple purposes, from providing areas for rest and informal meetings to accommodating practical needs like bike shelters and parking. Dividing the courtyard into two zones helped meet these needs without compromising its inviting atmosphere. One area is dedicated to functional elements, while the other focuses on leisure with seating, plants, and lighting.

“Dividing the space allowed us to address the functional needs while still maintaining a relaxing environment,” says Bukhardt. “The design provides spaces for both solitude and interaction, making it a dynamic environment where the surrounding community can gather, reflect, or simply enjoy the outdoors.” This thoughtful division of space ensures that everyone can find what they need, whether it’s a quiet corner for personal reflection or an open area for social gatherings and meetings.

Linear Steel Series—a seamless addition

The Linear Steel Series fits perfectly into the courtyard, enhancing both its design and connection to Copenhagen’s character. “The light gray of the furniture echoes the hard surfaces in the space, while the green adds a touch of Copenhagen’s character, and enhances the natural environment” Bukhardt shares. This

thoughtful color balance ensures the furniture complements the surrounding architecture while connecting with the natural elements.

The furniture had to be more than just aesthetically appealing—it needed to be practical too. “We wanted pieces that could handle outdoor conditions all year long, with minimal upkeep,” she further explains. Whether for a quiet lunch break, a casual meeting, or a lively event, the pieces needed flexibility. “The weight of the furniture ensures it stays in place but can still be rearranged for gatherings, making it perfect for any occasion in the courtyard,” she adds.

An evolving space

The courtyard is designed to evolve with time. As the plants grow and seasons change, the space will continue to offer new experiences. Already a popular escape for those working in the surrounding offices, it will only become more woven into the daily routines of its users. “The courtyard’s proximity to the office canteen makes it even more practical,” says Braat. “It’s a place where people can step out to recharge, enjoy a break, or meet with colleagues during the workday.”

“We want this to be a living, breathing space,” Bukhardt explains. “As the plants mature and the space continues to adapt, the flexibility of Muuto’s furniture will ensure it can serve both personal moments of reflection and social gatherings.” The courtyard will grow along with its community, remaining a welcoming spot for people to pause, reflect, and reconnect.

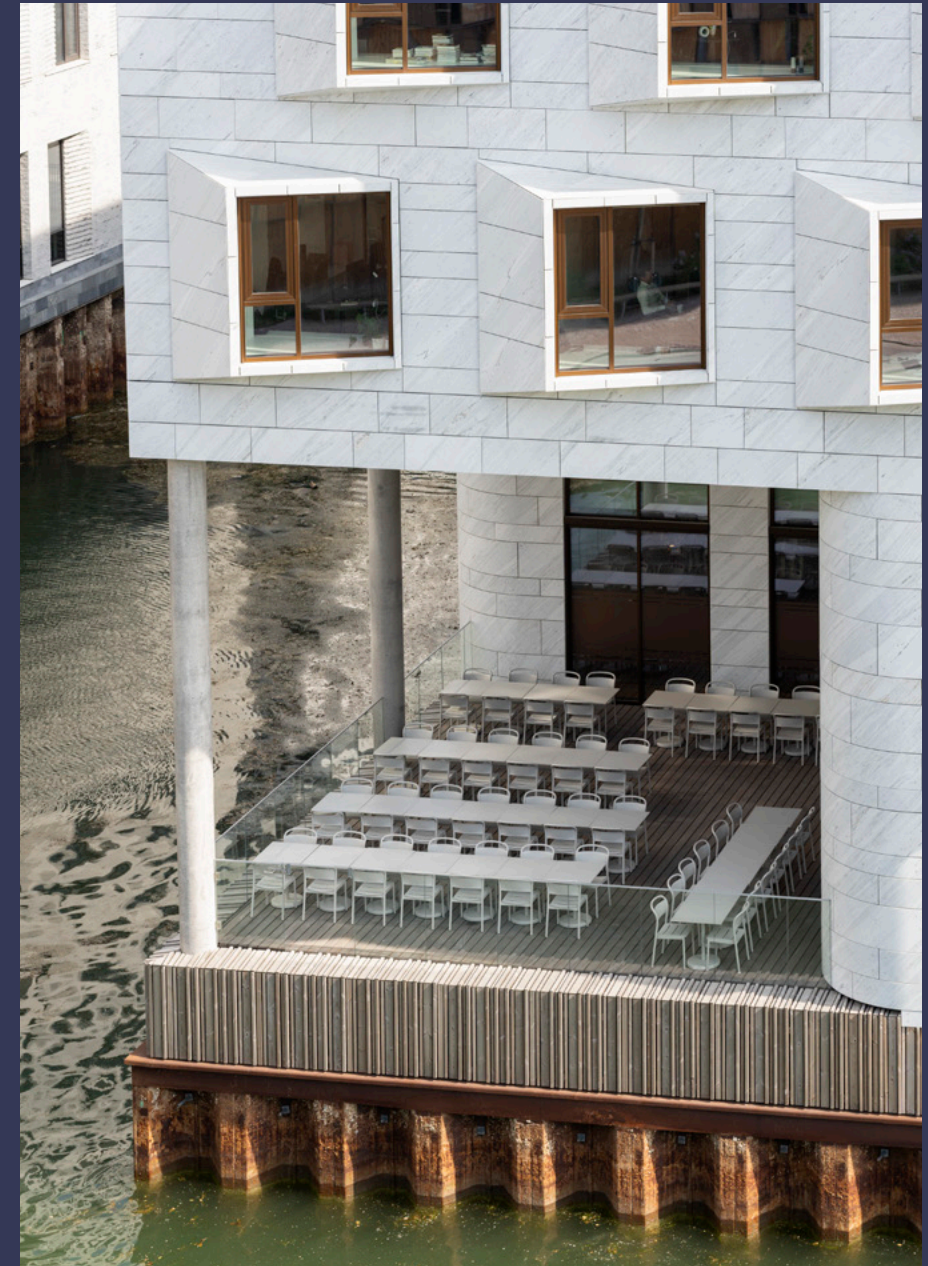

“The design provides spaces for both solitude and interaction, making it a dynamic environment where the surrounding community can gather, reflect, or simply enjoy the outdoors.”

Projects — Discover a curated selection of Muuto designs, thoughtfully integrated into exceptional spaces across the globe. Each project highlights a seamless blend of timeless design, functional innovation, and distinctive aesthetic. These inspiring examples offer new perspectives, sparking new ideas and possibilities for any creative endeavor.

sustainability demands

proof

At Muuto, we believe that sustainability demands proof. Guided by comprehensive data and documentation, we take an evidence-based approach, measuring the real impact our products and operations have on people and the environment. This is how we hold ourselves accountable — moving beyond assumptions to take impactful action.

We know the CO₂e emissions for 99% of our products — approximately 1 million items

We have mapped our greenhouse gas emissions across Scopes 1, 2, and 3. In this, 99% of our product range has been assessed — nearly 1 million items. This detailed understanding allows us to identify impactful actions toward our goal of cutting emissions by 50% by 2030.

For instance, we've reduced the carbon footprint of a bestselling Fiber Chair variant with 30% by using recycled plastic and FSC™-certified wood.

88% of our collection meets VOC standards, ensuring low chemical emissions for cleaner air

We spend 90% of our time indoors but in any space and often impossible to see, chemicals are emitted into the air from the objects we surround ourselves with. These emissions can contain Volatile Organic Compounds (VOCs), which can impact our health. Today, 88% of our furniture collection is VOC-tested and certified as low-emitting.

When testing against harmful chemicals we also go beyond regulatory standards, adopting disclosure requirements and thresholds 10 times stricter than regulations.

100% of new designs launched since 2022, using wood, are FSC™-certified to guarantee responsible forestry

As an FSC™-certified company (FSC-C028824), we support responsible forestry. All new designs launched since 2022, using wood, are FSC™-certified and by 2030 our goal is that 100% of the wood used in all products must be FSC™-certified.

92% of our furniture meets BIFMA standards — probably the most demanding durability tests in the industry

To give you the most durable products in the industry, testing is at the core of our development process. Our furniture is tested for safety and durability by leading independent institutes, with 99,7% meeting the European EN standards. However, we go a step further by testing 92% of our furniture to the stricter North American ANSI/BIFMA standards. BIFMA is highly performance-focused, featuring higher load and cycle thresholds.

This rigorous testing enables us to confidently offer a 10-year warranty on all BIFMA-tested products.

In 2024, we replaced 144.000 kg of virgin plastic with recycled plastic

For us, circular thinking means repurposing materials into new designs to reduce waste, resource use, and emissions while supporting a circular economy. That's why we started using recycled materials years ago. Switching the Fiber Chair Family's material to 100% recycled plastic and FSC™-certified wood replaced over 144.000 kg of virgin plastic with recycled plastic in 2024 alone.

100% of our indoor furniture and full textile assortment are produced without using PFAS

At Muuto, we acknowledge the growing concerns about per- and polyfluoroalkyl substances (PFAS). As part of our commitment to phasing out PFAS, we have already succeeded in eliminating all intentionally added PFAS from our textiles and full indoor furniture assortment—eliminating a harmful chemical group without compromising on quality, functionality or aesthetics.

Over 1.600 different spare parts available to enable repair

We create long-lasting designs to keep and pass on to the next generation. We are committed to ensuring the possibility of repairing our products and prolonging our designs' life cycles — therefore, we offer spare parts for all applicable designs, if any part of a design should for any reason need replacement.
